First Gardening in Nebraska---How Corn Came

FRANCIS LA FRESCHIE, SEED OF OMAHA CHIEF, WHO HAS WRITTEN THE HISTORY OF THE TRIBE FOR THE GOVERNMENT

SHU'DENAKI, AN OLD OMAHA PHILOSOPHER.

AN OLD INDIAN MUD HOUSE

Story of the Omahas' Planting and the Beginning of Agriculture in the Great Food State---Legend of the Corn and the Ceremony of the Primitive Farm Told by One of the Tribe, Showing the Thriftiness and Industry of These First Tillers of the Soil.

A story of the first agriculture in Nebraska. A pioneer and primitive method in agriculture in a state where corn is king and the grains and products are the backbone of the territory. This is the contribution of Dr. Susan La Flesche Picoté of the Omaha Division of the United States Department of Agriculture, who has figured largely in the betterment of the Indian today.

In telling the story of the Omahas, Dr. Picoté is revealing the fact that the Indian in her does not want to be self-sustaining and does not use his intelligence in securing for himself and others the soil conditions of life. It is a remarkable story, and will be read with interest by World-Herald readers.

Now that the farmer is preparing for the planting and the homestead of World-Herald readers are thinking about the little garden in the back of the yard, the story of the first corn crop and the first agriculture in the valleys of Nebraska is of special and timely interest.

BY SUSAN LA FRESCHIE PICOTÉ, CHIEF OF THE "RED STAR" OF THE OMAHA RESERVATION, NEBRASKA.

The life of the primitive Indian was in a primitive, primitive way. In the days of the first agriculture, the Indian was in a primitive, primitive way. In the days of the first agriculture, the Indian was in a primitive, primitive way.

The first agriculture in Nebraska was in a primitive, primitive way. In the days of the first agriculture, the Indian was in a primitive, primitive way. In the days of the first agriculture, the Indian was in a primitive, primitive way.
